# NEW TO RANGE FUEL VAPOUR VALVES

## FORD APPLICATIONS

*Our brand new range of Fuel Vapour Valves are now available*

Due to current emissions standards in Europe and the USA it is now a requirement for the use of diesel particulate filters (DPF). One issue is the regeneration of the diesel particulate filter as it requires such high temperatures. The fuel vapour valve is located pre DPF and is a critical component that enables the system to reach the high temperature required in the exhaust.
