

# FORD COMMON RAIL FUEL INJECTION

Merlin are official distributors for Common Rail fuel injection products for all the major **Original Equipment (OE)** suppliers such as Bosch, Delphi, Siemens-VDO and Denso.

Over the years **Original Equipment Manufactures (OEM)** such as Ford have used several different **OE** suppliers on different derivatives of a diesel engine. One engine may use a Bosch fuel injection system and on another different spec engine Ford may use a Delphi fuel injection system.

**Merlin** cater for all Ford Common Rail replacement parts on all Ford vehicles no matter what specification or **OE** supplier.

**We supply Common Rail Fuel Pumps, Injectors, Rails, and Sensors direct from the OE supplier.**

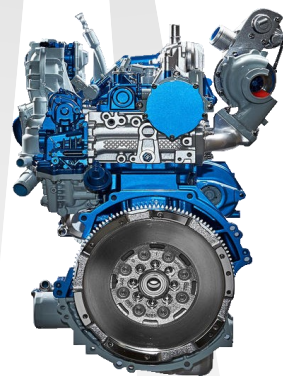

## Ford Common Rail Engines

The low-carbon **Duratorq** engine (introduced in 2000) was the first Common Rail power plant used by Ford in passenger and light commercial vehicles, the engine replaced the older **Endura-D** series engine.

In 2014 Ford introduced the Euro6 **EcoBlue** Common Rail diesel engine, again this has over time progressively replaced the previous Common Rail engine and is still in production today.
